

Flat Profile Mullion Seal Installation Instructions

September 21, 2017

1. Prior to installing partition, cut Mullion Seal to length. Portions may be butted together.
2. Do not remove cover strips from Mullion Seal until ready for installation. Clean face of mullion of dust and dirt; alcohol wipes are recommended for best performance.
3. Remove cover strip over adhesive from side facing mullion **only**. *Take care to remove cover strip without peeling the adhesive from the rubber.* Firmly set in place (Fig. 1). A roller is recommended; bond will increase with pressure and time.
4. Attach gypsum board(s) to the web of the end stud. Remove cover strip, place in position (Fig. 2) and set firmly in place applying continuous pressure.
 - a. As an alternative method, set prefabricated portion of partition (Fig. 3). Include double studs for additional restraint of mullion deflection (hi-rise applications).
5. Continue to construct remainder of partition.
